

Wildlife Webcams

[International Wolf Center](#)

Just south of the Canadian border, deep in the woods of Minnesota, a team of passionate biologists opened a habitat dedicated to researching gray wolves. Nearly three decades later the habitat remains committed to sharing that research. The wolf cam is a continuous livestream of the center's resident pack where you can watch these elusive creatures eat, sleep and relax in their enclosed habitat all throughout the day.

[Bonaire Underwater Coral](#)

Thanks to a restoration project dedicated to revitalizing shallow coral, the Dutch island of Bonaire is home to one of the healthiest and most vibrant coral reefs in the Caribbean. At any given point throughout the day, the livestream features hundreds of fish of varying species carrying on about their underwater lives.

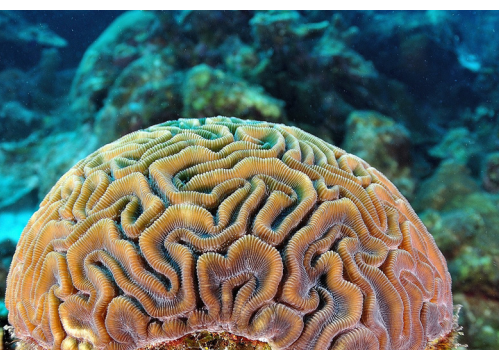

[Nikita the Lioness Cam](#)

The Big Cat Sanctuary in Florida is an organization best known for its contributions to rehabilitating big cats who have been abused. Nikita, the focus of this particular livestream, is a massive 500-pound lioness who was seized during a drug raid. Day by day viewers can tune in to watch her do what cats do best, nap in the sun.

[Peregrine Falcon Cam](#)

Sometimes even the fastest bird in the world needs to take a break. During the spring and summer months viewers can tune in to watch a pair of Peregrine falcons, Michelle and Newman, raise their young in a nest overlooking the Mississippi River in Minnesota. Check it out at night to see them at their most active.

[The D.C. Arboretum Eagle Nest Cam](#)

High above Washington, D.C., in the branches of a Tulip Poplar tree in the U.S. National Arboretum, a pair of eagles are raising their young. Aptly named Mr. President and The First Lady, the two bald eagles have reared four eaglets so far and can be seen during the summer months feeding their young.

[Alligator Swamp & Spoonbill Cam](#)

Located in St. Augustine, Florida, this livestream provides an all access pass to the state's natural ecosystem. For those who tune in sporadically, alligators can be seen basking in the sun while spoonbills feed and prune in the trees.

[Puffin Burrow Cam](#)

This livestream features a group of puffins who gather and nest during the spring and summer months 20 miles off the coast of Maine on Seal Island to nurture their young. It's very typical for puffins to return to the same spot each year to meet up with the same mate after spending months at sea. The baby puffin, or pufflings, are then raised and by the end of summer, all will part ways.

[Tembe Elephant Park Cam](#)

Set up by a busy watering hole in South Africa, the Tembe Elephant Park camera can see anywhere between 50 and 60 elephants a day. The park itself is a game reserve set up by a tribal council in order to better protect the elephant who is often the target of illegal poaching.

[Brooks Falls Brown Bears](#)

Tune in during late summer and you will not be disappointed. This little salmon haven in Alaska draws in masses of brown bears every year to plunder its natural splendor. When the salmon stock is high, bears crowd the area with their young trying to fatten up for the fast approaching winter months. Sometimes a wolf or moose will pop in to join the fun.
